* Hazard ratio (HR) for the composite endpoint of all-cause mortality and HF hospitalization, subhazard ratio (SHR) for HF hospitalization, CV mortality and non-CV mortality.

Multivariable models corrected as follows:

- Composite endpoint: age, previous hospitalization, presence of oedema, NT-proBNP, systolic blood pressure at baseline, hemoglobin, HDL levels, sodium, beta-blocker
- HF hospitalization: age, previous HF hospitalization, presence of edema at baseline, systolic blood pressure at baseline, and eGFR
- CV mortality: age, BUN, NT-proBNP, troponin T, and sodium
- Non-CV mortality: age, hemoglobin, CRP, and history of malignancy
